TASK 01: Valid Parentheses

```
</>Code
Java 🗸 🔒 Auto
  1 class Solution {
          public boolean isValid(String s) {
  2
  3
             Stack<Character> stack = new Stack<>();
              for (char c : s.toCharArray()){
                 if (c == '(' || c == '{' || c == '['){
   6
  7
                     stack.push(c);
                  } else if (c == ')' && !stack.isEmpty() && stack.peek() == '('){
  8
  9
                      stack.pop();
                  } else if (c == '}' && !stack.isEmpty() && stack.peek() == '{'){
  10
  11
                     stack.pop();
                  } else if (c == ']' && !stack.isEmpty() && stack.peek() == '['){
  12
  13
                     stack.pop();
  14
                 } else{
 15
                     return false;
 16
 17
 18
 19
             return stack.isEmpty();
  20
  21
  22
```

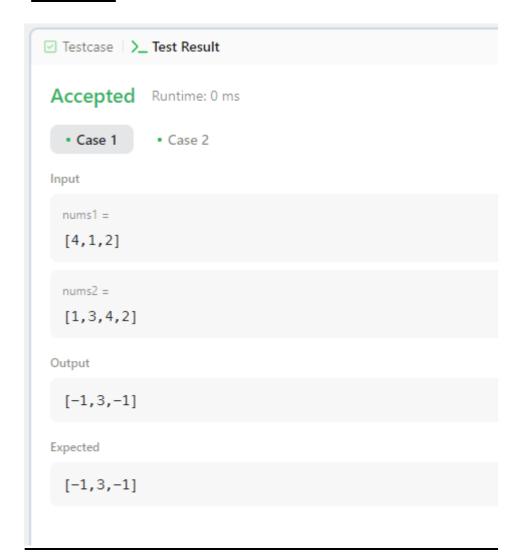

TASK 02: Palindrome Linked List

```
</>Code
Java V Auto
     class Solution {
          public boolean isPalindrome(ListNode head) {
   3
              if (head == null || head.next == null) return true;
   4
              ListNode slow = head, fast = head;
              while (fast != null && fast.next != null) {
   7
                  slow = slow.next;
                  fast = fast.next.next;
   8
  9
  10
  11
              ListNode secondHalf = reverseList(slow);
  12
              ListNode firstHalf = head;
  13
 14
              while (secondHalf != null) {
  15
                  if (firstHalf.val != secondHalf.val) {
                      return false;
  16
  17
                  firstHalf = firstHalf.next;
  18
                  secondHalf = secondHalf.next;
  19
  20
  21
              return true;
  23
  24
  25
          private ListNode reverseList(ListNode head) {
              ListNode prev = null;
  26
  27
              while (head != null) {
  28
                  ListNode next = head.next;
                  head.next = prev;
  29
                  prev = head;
  30
  31
                  head = next;
  32
  33
              return prev;
```

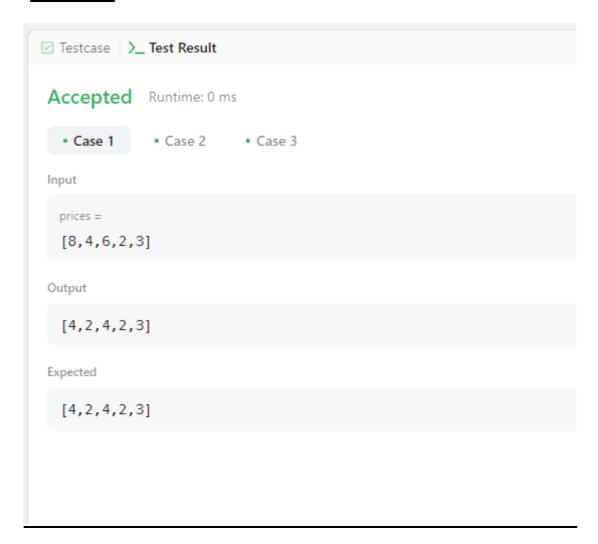

TASK 03: Next Greater Element I

```
</>Code
Java V 🔒 Auto
   1 class Solution {
          public int[] nextGreaterElement(int[] nums1, int[] nums2) {
   3
              HashMap<Integer, Integer> nextGreaterMap = new HashMap<>();
              Stack<Integer> stack = new Stack<>();
   4
   5
              for (int num : nums2) {
   6
                  while (!stack.isEmpty() && stack.peek() < num) {</pre>
   7
   8
                      nextGreaterMap.put(stack.pop(), num);
  9
  10
                  stack.push(num);
 11
 12
              while (!stack.isEmpty()) {
 13
 14
                  nextGreaterMap.put(stack.pop(), -1);
 15
 16
              int[] result = new int[nums1.length];
 17
 18
              for (int i = 0; i < nums1.length; i++) {
                  result[i] = nextGreaterMap.get(nums1[i]);
 19
 20
 21
 22
              return result;
 23
 24
```

TASK 04: Final Prices With a Special Discount in a Shop

```
</>Code
Java V 🗎 Auto
   1 class Solution {
          public int[] finalPrices(int[] prices) {
   3
              int n = prices.length;
              int[] answer = new int[n];
   4
              Stack<Integer> stack = new Stack<>();
   5
   6
              for (int i = 0; i < n; i++) {
   8
                  answer[i] = prices[i];
   9
                  while (!stack.isEmpty() && prices[stack.peek()] >= prices[i]) {
  10
  11
                      int index = stack.pop();
  12
                      answer[index] -= prices[i];
  13
  14
                  stack.push(i);
  15
  16
  17
  18
              return answer;
  19
  20
```

THE END
